Identity Card For Plastic Welder

The continuous research of processing tools permitting to improve competitiveness had been possible thanks to investments made along the years by the ownership . This effort had been turned up into:

- a larger production area; moving the production site to a strategic position only 15 minutes from the motorway exit Brescia-West
- an intensive and continuous training that allows to certification the entire personnel.

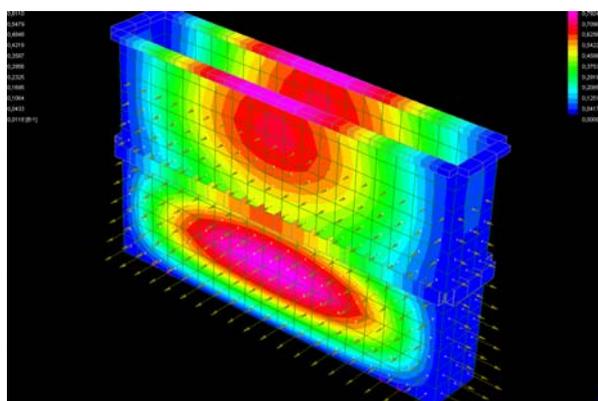

Products

– Conscious of the importance that the quality of labor work has in this production process the company employs for any manual welding operation only workers being certified by **TÜV SÜD** and everyone for its own competence sector.

If required, but in any case always for F.p.F. marked products, dimensioning calculations and tests are carried out using dedicated software and adopting as dimensioning criteria any by the European Norms imposed limit.

Jobbing production is the core business of the company F.P.F. Customers rely on us when they want to build according to their drawings or in a turnkey project:

- processing tubs for galvanic lines;
- Reactions vats for waste water plants;
- air recovering and distribution ducts

To give answers to a precise market request the company F.P.F. manufactures also own trade mark products, which starting from a catalogue configuration get then customized according to their applications, fluids and any other single need.

- Fumes washing towers;
- Storage tanks for chemical products;
- Energy recovering systems for aggressive environments.

Products

Galvanic plants' processing vats are usually made out of PP, PPS or covered with PVC layers.

On demand these vats can be completed or accessorized with:

- Double walls;
- copper bars;
- probes, level switch, ducts and valves;
- spray hoods or ramps;

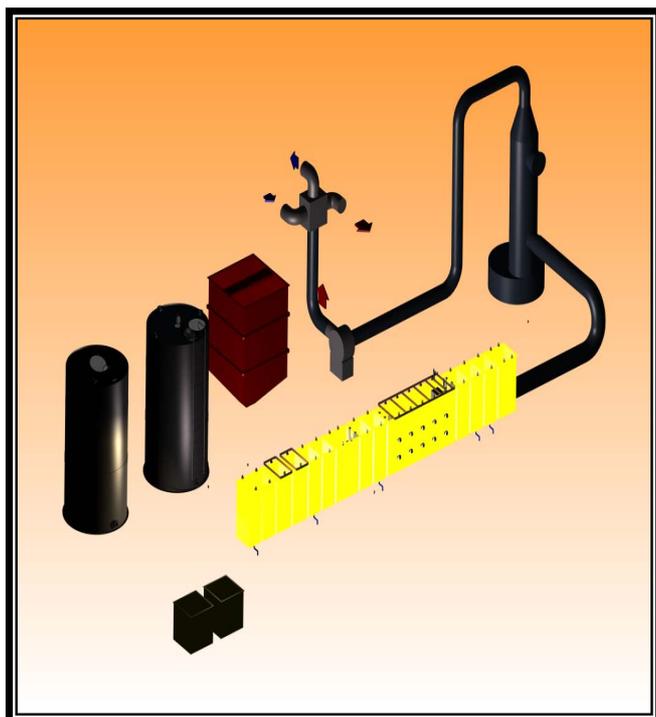

As it provided by the DVS 2205 norm any Chemical products storage tanks applied on waste water plants or other devices are designed and manufactured, out of PP or PE slabs. The focus point of these tanks is their absolute customizing possibility and their favorable quality / price ratio:

- entering trapdoor
- internal or external stairs or gangways
- electric level switches, connections, sloping bottom, double wall agitators;
- capacity **1 a 22 m³**

Products

Focus points of the company F.P.F. are the manufacturing and assembling of canalization plants made out of PP or PVC.

A dimensioning that takes into consideration fans' operating economy and a design that considers any detail allows to satisfy any plant constructor's need but also the final users' ones. With the construction of a suction plant the company F.P.F. guarantees:

- fans' correct dimensioning;
- an accurate aeraulic balancing of the plant;
- a fast installation committed to internal personnel

Revamping and maintenance services

The company F.P.F. has highly specialized personnel for its revamping activity, either in Italy and abroad.

On customer's demand the company may provide complete turnkey solutions supplying mechanical, plastic, electric parts and also the necessary software, intervening on already existing plants to optimize their performance.

The revamping service offered by the company F.P.F. consists in an accurate overhauling of used plants that may interest the whole plant, or concern the sole mechanical, plastic parts (vats, storage tanks etc.), suction plants and fumes purification plants.

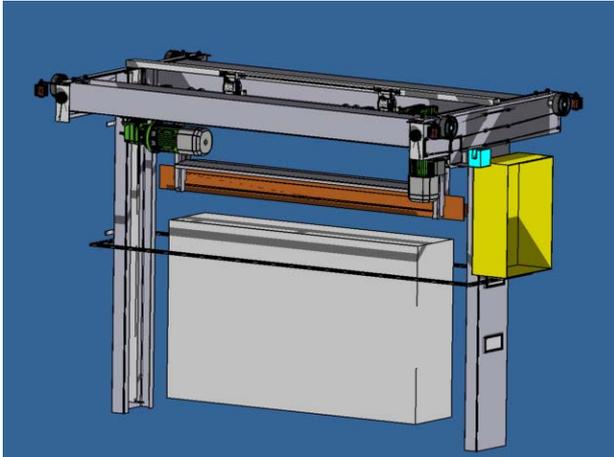

The plant gets overhauled in such a way that it can be brought back to its original productive features or can be adjusted to any eventual new need of the customer. Doing so it is possible to recover machines and plants that were considered not to be any longer suitable for the own needs equipping them, by a partial or total revamping operation, with up-dated and more performing devices and adjusting them to a fully compliance with any norm concerning air and water pollution.

Customer service is a fundamental requirement for any company producing special plants and equipments manufactured according to customers' needs.

Due to this reason the company F.P.F. paid always attention to any aspect concerning customer service and maintenance after installation and / or the overhauling of a new plant.

Revamping and maintenance services

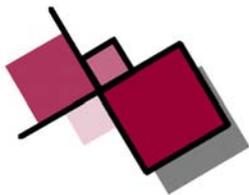

The company developed recently a maintenance program studied appositively that allows to check periodically the status of the machine and to intervene timely if specialized technicians should ascertain an operating anomaly.

The company F.P.F. Impianti offers a complete strategy spacing from after-market specialized supports to consultancy services and specialized services.

Other services being offered :

- Interventions on demand, preventive maintenance activities and emergency support;
- spare parts;
- overhauling and repairing at specialized workshops;
- on site diagnostic concerning plant's operating status;
- training / drilling for users and maintenance-operators.
